Additional Information: Received a call from a complainant about objectionable odors coming from CLCM. The odor was identified while picking up a person at the neighboring complex Personal Matters / Ex. 6 The odor was detected when due east of the plant. The odor was characterized as a very strong sweet smell that takes one's breath away. There was a lot of smoke coming out of the plant stack too. The odors made one hold their breath until travelling some distance away from the area. The complainant preferred to remain anonymous.							
Investigated On: 3/23/2018		Investigator(s): Mike Griffin <i>MG</i>		Report Below/Attached			

Remarks:

On 03/13/2018, the winds were from the north west at approximately 5 - 8 mph. The weather data would indicate that CLCM would be upwind of a complainant making an observation east of the facility.

On 3/20/2018, I surveyed the area for objectionable odors. I arrived at 9:05 AM and surveyed areas starting north of the facility, east, south and finally west. The winds were 15 to 20 mph from the east. The temperature was ~30 Deg F. I noted a white plume discharge from the facility's main discharge stack. The plume was vertical and upward. While immediately downwind of the plant, I did not note any odors of concern. I surveyed areas further to the west, travelling north and south on Artic Street and Iowa Street, between Norwich and Howard Streets. There were no odors of significance noted. I concluded this activity at 9:20 AM.
